

**Do you want to identify that persisting messaging or transactional issue?**

## **Data Analysis of ATM/Switch Messages and Transactions**

One of the most annoying aspects of IT technology is the fact that one can know that there is a problem but can not identify it easily. Our engagement here is to either pinpoint potential messaging problems and to provide analysis on which systems communicate incorrectly and why based also on their transactional messages. Also we can provide various statistical analysis of transactions and systems used. This provides insight to technical and business aspects such as timeouts of systems, errors in responses etc. but also for example number of transactions, on us and off/us, as well as time/period analysis and forecasts.

There is a wealth of information in messages that are exchanged between systems such as device status, transactions information, value but also operational status and health of the system in place itself hidden in plain site, such as delays of messages that may cause server timeouts or failed to arrive messages because of inactive scripts or business rules.

You will benefit through this service as we can give you both IT as well as business information which you can analyze further and take important strategic decisions such as if the current system or sub-system serves your purpose, if it has to be enhanced or for a device to be upgraded or for an ATM to be moved to a better place where it can produce more transactions.

Application exception occurred:
App: CustomisationLayer.exe (pid=3824)
When: 7/24/2006 @ 16:41:8.718
Exception number: 0xE04D4352 (NC&R Software Exception)

Detailed Software Exception Information:
Organization: PB50
Environment: mError

*----> System Information <----*
Computer Name: S12
User Name: Administrator
Number of Processors: 1
Processor Type: x86 Family 15 Model 7 Stepping 0
    
```

**The Service Deliverables:**

- NDC messaging examination (on sample ATMs)
  - > Device Health, identification of usual problems
  - > Performance and Availability Level report
  - > Timing between messages
  - > Timing between ATM-Switch, identification of timeouts, related issues
  - > Transaction reconciliation test (proof of correctness)
  - > Illegal switch or ATM messages
- UEH/XFS/APTRA/PROTOPAS/DIEBOLD Logs analysis
- Device Logs / Software logs analysis
- ISO 8583 Logs analysis
- ATM Monitoring System (GASPER/VISION/PROVIEW/EMS etc.) message analysis
